Bonjour, Juste une petite question comment modifier le code Visual Basic si dessous, en Windev

```
Dim SCIP As SENDCMDINPARAMS Dim SCOP As SENDCMDOUTPARAMS Dim  
lpcbBytesReturned As Long // Jusque là ça va With SCIP .cBufferSize = 0 With .irDriveRegs  
.bFeaturesReg = SMART_ENABLE_SMART_OPERATIONS .bSectorCountReg = 1  
.bSectorNumberReg = 1 .bCylLowReg = SMART_CYL_LOW .bCylHighReg = SMART_CYL_HI  
&#039;Compute the drive number. .bDriveHeadReg = &#039; Or (DriveNum And 1) * 16  
.bCommandReg = IDE_EXECUTE_SMART_FUNCTION End With .bDriveNumber = DriveNum End  
With // Jusque là, je seche
```

merci de m'éclairer
