Hello peter,

>But maybe i don't understand exactly what you have in mind >with trying that?

The reason why I want to acces a HF7 from an external language is because I already have an application (not WinDev, precisely Lotus Domino 5),and I want to transfer data from my Domino base to a new HF7 base.I know that one solution is to read my Lotus base from WinDev.I've managed that already.But, I wanted to achieve the opposite as well.Lotus Domino allows you to use Java language.That's why I was looking for external language approach.

P.S. romu, si tu veus parler en prive, mon e-mail est :
