Bonjour, à tous,

Je désire tester les services SOAP d'Ebay.

J'ai importé le service XML fournis par Ebay et j'ai un exemple en C# pour interroger l'heure du serveur mais je ne parviens pas correctement à le traduire en Windev.

Si une âme charitable pouvait m'aider ?

Voilà le code C# :

```
using System; using TesteBaySoap405.com.ebay; // use your project name here namespace
TesteBaySoap405 // use your project name here { class GeteBayOfficialTime {
[STAThread] static void Main(string[] args) { string endpoint =
"https://api.sandbox.ebay.com/wsapi"; string callName = "GeteBayOfficialTime"; string
siteId = "0"; string appId = "yourAppId"; // use your app ID string devId = "yourDevId";
// use your dev ID string certId = "yourCertId"; // use your cert ID string version = "405";
// Build the request URL string requestURL = endpoint + "?callname=" + callName +
"&siteid=" + siteId + "&appid=" + appId + "&version=" + version + "&routing=default";
// Create the service eBayAPIInterfaceService service = new eBayAPIInterfaceService();
// Assign the request URL to the service locator. service.Url = requestURL; // Set
credentials service.RequesterCredentials = new CustomSecurityHeaderType();
service.RequesterCredentials.eBayAuthToken = "yourToken"; // use your token
service.RequesterCredentials.Credentials = new UserIdPasswordType();
service.RequesterCredentials.Credentials.AppId = appId;
service.RequesterCredentials.Credentials.DevId = devId;
service.RequesterCredentials.Credentials.AuthCert = certId; // Make the call to
GeteBayOfficialTime GeteBayOfficialTimeRequestType request = new
GeteBayOfficialTimeRequestType(); request.Version = "405";
GeteBayOfficialTimeResponseType response = service.GeteBayOfficialTime(request);
Console.WriteLine("The time at eBay headquarters in San Jose, California, USA, is:");
Console.WriteLine(response.Timestamp); } }
```

Par avance merci pour vos conseils.
